visible or not. URL Format: The stream URL format is as follows: You will need to enter the Stream URL in the appropriate format for each scenario: Numbering format: Depending on the music player that you have loaded (this is if you have WMP), the numbering may be different from the following. Example of each format is as follows: If you do not have WMP, you will need to enter the stream URL in the appropriate format for each scenario: Basic Formats Every artist has their own individual type of song, and they may be played in any order. Song Types: These are the different types of songs that can be played. You may enter a variety of song types, or you may enter a subset. Only enter the song types that you want the player to be able to play. If you do not enter any song types, then the player will play all the songs in the folder. Stream Types: These are the different types of streams that can be played. Select the stream types that you want to play. If you do not enter any stream types, then the player will play the first song in the folder. Song Type Subsets: If the player cannot play a song type, it can try one of the following song types instead. Select which song type subset you would like to use. Example: Select "Rock" from the "Song Type Subsets" list. Start: If you want the player to begin at a particular time, enter the starting time. If the starting time is before midnight, enter the day of the week. If the starting time is after midnight, enter the hour. Example: The following example will start the player at 9:00 pm. If the starting time is before midnight, enter the day of the week. If the starting time is after midnight, enter the hour. Example: If you want to enter a custom song type, select it from the list. If you want to enter a custom stream type, select it from the list. Select the number of times the player will play the song. Example: If you have a playlist that has a large number of songs, you may choose to play this playlist on repeat. Repeat 77a5ca646e

## What's New In FM 104 Radio Streamer?

Radio streaming widget. This is a simple widget that streams RadioFM.FM from Dublin, Ireland (IEC 039). The widget is stable, but with the idea that it could be expandable, i.e. one could change the streaming URL. Also, the Mac OS X version of this widget requires the Java Virtual Machine to be available (I haven't tried it yet though). Examples:  These two screenshots show the same widget in action: [source.java] ----

---
