AutoCAD is generally accepted as the industry standard for CAD software, as it was the first widely popular and commercially successful desktop-based CAD system. AutoCAD (and subsequent AutoCAD systems) has typically been the CAD system of choice for architects, engineers, draftsman, and many others, as they created CAD drawings of skyscrapers and highways, bridges, statues, and boats. AutoCAD continues to gain market share, even as other CAD systems have become more popular, and new users are added each day. The popularity of AutoCAD and other Autodesk products has also seen an increase in CAD software piracy by business owners who misuse the software for free without the intention of paying Autodesk for the license. Such AutoCAD software piracy has caused many problems in the

AutoCAD community, and there has been a long-running public dispute on Autodesk's public CAD forum, the Autodesk CAD Collaboration Community. There have also been allegations of AutoCAD RMT (Remote Monitoring Tool) abuse in AutoCAD forums by licensed Autodesk employees, who help inexperienced Autodesk users learn how to use AutoCAD. By the late 1990s, AutoCAD was a staple of CAD programs for most business, as it was powerful enough to create CAD drawings for complex projects. As of 2020, the current AutoCAD version is AutoCAD 2018.

It would not depend on any other piece of software, such as a word processor or spreadsheet program. All of these features were taken into consideration when it was being developed.
