by the task of designing a website for a nuclear power plant. Rather, Gregory Smith, the owner of Toxic Waste Pros, had a vision of how the web could help him educate the public about the dangers of chemical pollution. The public relations effort also produced some great success. His company's press release got published in Science magazine, and a B1 Federal Grant For A has been provided to allow the school district to fix the roof., the local

newspaper read a front page story about the project that Smith believes was the only positive coverage of the project that was seen in any of the newspapers. Smith started his company, Toxic Waste Pros, in 2005 when a customer called to find out about the harmful effects of chemical exposure. "I was a geologist, and I had just moved to the Tampa Bay area. I didn't know the local area, and I didn't know about industrial plants. And I didn't

know any toxicologists. But that was what I thought I would be doing," said Smith. "The customer was very interested in learning more about how his company was affecting our environment, and he wanted to find out what options were available to clean up the chemical waste they were causing. He had no idea about the fact that it was an industrial waste they were generating." Smith began doing a little

research and consulting, and made the decision to create Toxic Waste Pros. As a result, he took his first trip to the Florida Power and Light Company's nuclear power plant near Tampa in January 2006. Smith's company was hired to clean up the dirt, debris, and other contaminants on the site. The work that he and his employees did, using both dredging and vacuum equipment, proved that the groundwater at

What's New in the AutoCAD?

Bring 3D Models to AutoCAD for editing. New on Windows® 10: Modeling Toolbar Within AutoCAD, you can interact directly with 3D models. Control the 3D model's 3D properties and position the model in your drawing. See the live update of your model as you add, move, or remove elements. 3D Clouds: AutoCAD Cloud Automatically create hyperlinked, collaborative 3D drawings on mobile and desktop devices. 2D Clipping:

Clipping Zones. Clip objects, intersections, and faces and have them appear as zones in your drawing. Clipping supports compound and non-compound objects. With Zone mode, you can apply a different color to each clipped object. Xtreme Curves. Create beautifully curved polygons that are particularly important for architecture. Curved clips are available for straight and partially curved line cuts. Text Overlays: Text

Overlays. Add a text layer that covers or partially covers other layers. Text Overlays are used for corrections, annotations, or clearances in the same way that text objects are used. 3D Drawings: 3D models created in AutoCAD can be imported and edited in 3D space. (video: 2:30 min.) A New Look for Layout: New Design Views. Use the new Design Viewport for viewing, editing, and modeling all aspects of your design at once. Layer

Editing. The layer properties bar provides easy access to layer and alignment options. Layer Properties. Now you can set an option and instantly update the drawing. Manipulate Layers. Easily edit and create new layers and set their properties. Add Layer. Create a new layer, select it, and move it to any position in your drawing. Command Modes. Access commonly used commands in a different location to speed up your workflow.

Layer Settings. Set the layer visibility, pattern, color, and linetype of one or more layers in a single command. Drawing Window Options: New 2D drawing window options. Apply one of 10 new shades of gray to the drawing window, or use a second color to outline the drawing area. Add Object Properties to the Drawings Window: Hover your mouse over any drawing area object
