RATIO v1.1 NetRatio - The fastest monitoring tool for Windows Network traffic on your PC, NetRatio is as fast as using "netsh" commands, but offers much more features: - Monitor bandwidth: - Monitor traffic: - Control bandwidth: - Control traffic: - Analyze traffic: - Capture traffic: - Send traffic: - Monitor traffic to and from remote hosts: - NetRatio is also optimized to monitor usage of TCP connections: - Display number of active TCP connections: - Show number of connections (active/non-active) with different states: - Displays the used ports of the connections: - Displays the used ports of the connections, listed by protocol (tcp, icmp, udp, sctp, etc.): - Display TCP connections that are closed or are finished (quiesced) at the moment: - Display TCP connections that are dropped (with a "-" flag in the first column): - Display the used ports of connections that are closed or are finished (quiesced) at the moment: - Display connections that are active but not using much bandwidth (e.g. when downloading or uploading): - Display connections that are active but do not use much bandwidth (e.g. when downloading or uploading) - Analyze connections that are active but do not use much bandwidth (e.g. when downloading or uploading): - Analyze connections that are closed or

---

are finished (quiesced) at the moment: - Display the used ports of connections that are closed or are finished (quiesced) at the moment: - Display connections that are active but not using much bandwidth (e.g. when downloading or uploading): - Display connections that are active but do not use much bandwidth (e.g. when downloading or uploading) - Analyze connections that are active but do not use much bandwidth (e.g. when downloading or uploading): - Analyze connections that are closed or are finished (quiesced) at the moment: - Display the used ports of connections that are closed or are finished (quiesced) at the moment: - Display connections that are active but not using much bandwidth (e.g. when downloading or uploading): -

#### What's New In?

\* Compatible with Windows 2000 / XP / Vista \*  
Includes Source code \* Search Google Conky-Stats is a multi-language, multi-platform status information and statistics application for Linux / Windows / Mac / Unix. \* All scripts are configurable \* Reports can be saved and processed offline (used for the Ad-Hoc method) \*  
Multiplatform \* Info in English, French, German, Russian, Spanish, Polish, Hungarian, Bulgarian, Croatian, Czech, Slovak and others Paintme is an easy to use and friendly graphical interface to the ADOM DEVAPI libraries. It allows you to paint

---

and draw in the common Windows ADOM/GDI graphics context. It provides all the commonly used functions for the drawings, such as Pen, Line, Polygon and Arc. Paintme has an easy to use editor for all windows, including the Document, Font and Palette. Paintme supports imported images for the frames and the background. The Paintme lets you share drawings on the internet through a zipped file. Version: 3.0 File Size: 3 MB

ConnectTool enables you to monitor and control the IP Configuration of a Windows computer by means of Active Directory. It is a powerful tool for Active Directory Domain Admins and Network Engineers. It is extensible to all types of Windows. In addition, it also works well with Linux and Unix. An audio-visual communication system, designed for amateur radio enthusiasts. It is intended to be implemented in a single computer (from which there is an Internet connection). It may be used to exchange real audio messages (through VOIP) or to exchange text messages (through WebSockets). The system is based on the SIP and STUN protocols.

ApacheCalc is a simple, powerful, and fast calculator for Windows. It is quite similar to the 'calculator' in the Microsoft Office suite. Its main purpose is to quickly calculate a simple mathematical equation.

Armitage is a free, feature-rich Internet Explorer add-on, designed to hide dangerous websites. Users can use it in addition to a web browser. It can block clickjacking, phishing, password stealing, unsafe

---

downloads and other threats. Acadane is a Python library that provides a simple and clean approach to using a remote file system in Python, without using any third party libraries. It provides classes to access a remote filesystem. The classes implement a default remote file system, where files are stored in a local directory, that is mirrored to a remote directory. There are classes for listing, modifying and creating files and directories, and classes for uploading files and directories. ShowDialog is a simple small and fast application for dialogs. It generates dialog code for Microsoft Office or Visual Studio and a dialog box is displayed as a result. The dialog can

---

## System Requirements:

The game requires a PC with an AMD or NVIDIA-based graphics card with support for Vulkan 1.1. If your GPU is an AMD-based device, the most up-to-date AMDGPU driver and Vulkan 1.1 driver are highly recommended. The game also requires a minimum of a Core i5-6300HQ or Core i7-6700HQ (with SMT). If you plan to use VR headsets, such as HTC Vive and Oculus Rift, the recommended minimum spec is Intel i5-6600K or i7-6700K
