Tube Hunter Ultra 2 is a free program that lets you make video.Hegel, Friedrich Contact: Biography While writing his first "Discourse on the Method" Hegel reflected upon the way scientific conceptions of nature have gained popularity and influence in our time. He saw the theory of Descartes, Leibniz and Kant as the culmination of an evolution that can be traced back to the Greeks (in particular, Anaxagoras). With the help of the empirical method, nature is no longer considered as an harmonious system, but as "a collection of isolated existences." The scholar's investigation involves nothing but the identification of the means that nature offers for the purpose of satisfying human needs. The scholar is a spectator, engaged in a "spectatorial existence." Nature is nothing but a collection of happenings. It is a stock of things, processes and events. The sciences are the "science of things." They investigate things, treat them as means. The relation of the sciences to society is therefore one of "abstraction," and the scholar only relates what is "objectively valid." Science is science of things. But in this relation, the "soul" of man has died with the "soul" of nature.DISMIS; and Opinion Filed October 25, 2019. In The e79caf774b
