Interior Design 12th: Interior Architecture To understand what an interior architect does, it is important to know the fundamentals of architecture. There is a definite difference between architecture and interior architecture. Both are important fields of study, but they are not quite the same. Architecture is the building of structures. Architecture is the art of planning the shape and material of the building. An architect designs the entire structure of the building from start to finish, including the interior plans, furniture, lights, and everything else. A building's plan and structure determine what the inside looks like. The design of the outside of the building, however, is often a separate and independent decision from the interior designs. The architect will make that call. An architect's job is to plan the shape and structure of the building, make sure it meets all the required laws and regulations, and make sure it is built correctly. Architects do not have to be familiar with building construction, though an architect who is an expert in construction is a big plus. Architects should be familiar with the local building codes and regulations to avoid costly lawsuits down the road. An architect designs the interior of the building. Interior architecture may be called home architecture, furniture architecture, or home planning. The interior designer plans the interior design of the building, creating the layout of rooms and spaces. Interior designers are also called into the mix to be part of the final designs. They take the plans provided by the architect and then plan what the interior of the building looks like. This is where the whole process comes together. Interior designers plan rooms and fill them with furniture, curtains, lighting, and everything else. The result is a functional interior that is beautiful. If you would like to learn more about interior architecture, we have a good list of useful links to help you. A: I think it's a URL encoding issue. You have this line: url += "?ptype=wazu&pf=" + p_faceware; With the following encoded URL: Which appears as: and when it's posted here, it's decoded as: With the same Apache processing, the encoded URL is posted, the browser adds the?, and here it's decoded as: When the browser posts the form, the? are removed by the form handling code, but the & is not, so it is posted as: ptype=wazu&pf=1/2/3/0/1 In other words, the &'s are being used as part of the form field name so it never actually reaches the site. Personally, I wouldn't actually be all that surprised if I got the same thing posted to my site. Sikandar Khurram Sikandar Khurram (; born 3 March 1995) is a Pakistani television actor, model and producer. He is best known for his role as Noman Iqbal in serial Meri Awaz Suno on ARY Digital and his acting as Haji Siddiq on Urdu 1. Early life and career In 2013, Khurram made his acting debut in the serial Meri Awaz Suno. In this serial, he played the role of Noman Iqbal, the main antagonist of the serial. The serial aired on ARY Digital in 2013. In 2014, Khurram starred in the serial Khuda Kay Liye as Haji Siddiq which was broadcast on ARY Digital. In 2015, he played his first lead 0cc13bf012

A 35-year-old woman presented with progressive right-sided dystonia of the face and eyes. The clinical examination was characteristic of typical pipirical dystonia. There was no evidence of basal ganglia dysfunction or a central nervous system neoplasm. Positron emission tomography with 18F-fluorodeoxyglucose showed hypermetabolism in the primary and supplementary motor areas, but no lesion. Further investigation failed to show any abnormality of the dystonic muscles, despite the possibility of more subtle changes in the anatomical and functional basis of dystonia. The pathogenesis remains uncertain but is most

likely to be either a disorder of impulse conduction in the sensorimotor cortex, or an acquired topographic dysfunction of excitatory and inhibitory interneurons in association with dystonia.

Q: How to get mean value of previous 5 days in pandas I have dataframe with two columns that has date and value

```
df = pd.DataFrame({'date': ['2018-01-01', '2018-01-02', '2018-01-03', '2018-01-04', '2018-01-05'], 'value': [0.1,0.2,0.3,0.4,0.5]})
```

I want to get mean value of previous 5 days in new dataframe, so my desired result is

```
df2 = pd.DataFrame({'date': ['2018-01-01', '2018-01-02', '2018-01-03', '2018-01-04', '2018-01-05', '2018-01-06'], 'mean': [0.2,0.3,0.4,0.5,0.2,0.3]})
```

What I tried is:

```
df2 = df.loc[df['date'].dt.date.isin(-pd.Timedelta(days=5))]
```

```
df2 = df.loc[df['date'].dt.date.isin(-pd.TimeDelta(days=5))]
```

```
df2 = df.loc[df['date'].dt.date.is
```

We have developed a facile method for chemical modification of antibodies, which enable their use as carriers for targeted delivery of small interfering RNA (siRNA). Targeting peptides, conjugated to poly-ethylene glycol (PEG), or amino terminus of an antibody, were synthesized and subsequently conjugated to the cysteine residue of PEG-conjugated antibodies. The resultant PEG-conjugated antibody has high affinity to antigen because of the conjugation at the same point. In contrast, when the targeting peptide is conjugated to the cysteine residue of PEG-conjugated antibody, the resultant antibody is modified at two points and, thus, shows lower affinity to the antigen. When these antibodies were used as carriers for siRNA, specific siRNA delivery was achieved by the targeting peptide-conjugated antibody. We

also developed an alternative carrier, which can directly conjugate to siRNA, without the need for antibody modification. Authorities say that a New Jersey woman named Cheryl Fleming was taken to the hospital in an ambulance after a gas leak from a propane tank that she had in her home. TOMS RIVER — Authorities say
