Everyone's stupid and it is so unbelievably obvious that it's incomprehensible. And you're no better. No, it is precisely by being superior, which is easier said than done, that you are now like everyone else." When the number of defective cells reaches critical levels, the immune system that is designed to eliminate them with inflammation and a high fever will have to try to contain them, and allow the victim to die of a chronic illness, but not succumb to cancer, as otherwise there would be no time to develop an anticancer therapy. It is curious to note that, in principle, any benign disease with a large presence of activated T cells would be able to induce an oncoimmunological response to facilitate an anticancer therapy. A typical instance of this type of response is a patient with rheumatoid arthritis in whom the immune system has been weakened and the patient has become prone to cancer. In this case, the cancerous cells are eliminated by an anti-T-cell therapy combined with a cytotoxic drug, whereas the noncancerous cells are restored to health. Unfortunately, these methods also act against the beneficial effect of the immune system, and it is necessary to make use of powerful immunosuppressant drugs to control the excess inflammation and to reduce the death of activated T cells. Although these treatments are possible, their use is limited to people whose tumor is benign, and the majority of people are not subjected to a significant increase in cancer risk as a result of being treated. Currently, researchers are looking for novel ways to counteract the negative effect of the immune system in cancer patients. One of these methods involves inducing the presence of specific natural antitumor immunity by administering a vaccine that triggers the production of a T-cell response that is able to recognize tumor cells. Although the transfer of genes coding for antitumor proteins to patient cells is quite effective in mouse models of cancer, it seems to have poor therapeutic potential in humans, given that most of the T-cell clones that respond to the vaccine do not recognize the specific tumor-associated antigen, which is only expressed by a subset of tumor cells in many cases. The ability of

Well, the gameplay starts out fairly classic, with the whole map divided into lanes, each of which you have to conquer. In each of those, there are zones, some of them will give you an attack bonus, healing, life or mana. Each zone, has its own system to level up, and you gain more experience as you increase your level. Each unit is assigned a strength level, and each level it gets new abilities, but you will also get experience points, through which you can increase the level of your units. Each level, you can also get a fully trained unit, both in attack and defense. There are also special items, like the first aid, weapon and weapon training, and many others. And of course, new units can be hired. But, just to get an overview: to strengthen your units, you can use mana, and spend mana, just like mana points in the previous game. A gem to strengthen your units is called an «Opal», that you can buy and send to your world. The amount of opal you have at home determines the strength of your units. If you use mana to strengthen your unit, the playing field is somewhat distorted, as your mana goes down with every use. But don't worry; your healer replenishes your mana, automatically. Gems can be found, but can also be bought from merchants, who have their own «economy» that they rely on. If you don't know, how your economy works, just watch what others do. Experience points don't always give you new abilities, a lot of the time can be given to your units. Another, faster way to get new abilities, is with «Campaign Points», or «CP» for short. These points will be gained after a certain number of battles, and give you new abilities. But, you still need money, and money is gained by passing in the markets, by conquering or by selling your goods. So, if you plan to convert to Heroes, beware of the economy. Game Screenshots: Gameplay Trailer: Developer Interview: A Few Words about Monsters: Well, in Heroes of Might and Magic, you always encountered those little nasty things, with pretty strong units, with which you had to battle. The new monsters in this game, is that they don't always attack and instead sometimes hide, or even regenerate
