What's New In?

Shortcut Hotkey Editor is an interesting alternative for changing the assigned keyboard shortcuts. The application enables you to assign a hotkey to shortcuts to open programs, to access folders, or customize settings, all without requiring a registry entry. What's more, the application can also be used to create shortcuts on the desktop. The setup process can be performed in two ways. Firstly, the program can be launched directly from the installation folder, or, if the program is placed on a USB drive, the user can drag the setup file to an empty desktop space. The application gives the option to specify the target shortcut of the hotkey, including modifiers such as CTRL and Alt. On the other hand, file specifications are limited to *.ink or *.url files, which are used to create shortcuts on the desktop.

In addition, the program does not provide a way to create shortcuts for executable files. Shortcut Hotkey Editor features The program has a very simple layout, with few features. The only available option besides assigning hotkeys is to rearrange the shortcut or open the browsing dialog. Another feature worth mentioning is the interface. The software looks rather dark and monochromatic, which can be uncomfortable. When creating a shortcut, an error message appears when the shortcut path doesn't exist. Another issue is the way the hotkey functions work. In other words, the shortcut doesn't replace the target, but instead, puts its value before the assigned hotkey command. Instead, the hotkey function should be written after the hotkey command. In case an existing shortcut is edited using this method, the hotkey command will appear twice. A significant drawback is the fact that the hotkey command can't be entered as a space character in the input field. The expressions must be manually written down, even when creating a shortcut on the desktop. Shortcut Hotkey Editor is available as a free application for portable computers, but has limited file support and input method restrictions. Your email address will not be published.
