Sega has released a new trailer for the Yakuza games, which can be seen below. The trailer is the first of many planned trailers for the Yakuza series, including those for the Xbox One and PlayStation 4 versions of Yakuza Kiwami and Yakuza 0. Yakuza Kiwami will be released on February 7 in Japan and February 10 in the West. Yakuza 0 will be released on February 21 in Japan. In addition to this release, Yakuza 6: The Song of Life will be released on October 25, 2016 for PlayStation 4, Xbox One, and PC. The game is the spiritual sequel to the original Yakuza. It includes the original game's story, but introduces new characters, a new setting, and new gameplay features. The original Yakuza was released for PlayStation 2 in 2005. The game was also ported to Xbox 360 and PlayStation 3 in 2006. Watch the trailer below. FILED NOT FOR PUBLICATION NOV 02 2016 UNITED STATES COURT OF APPEALS MOLLY C. DWYER, CLERK

code run quicker or should i make a function to do this? Any help would be appreciated. A: Take a look at [UIView setAnimationsEnabled:]. This will allow you to have fun with animations. If you are having performance issues with animations in general, then you may find that disabling caching will fix things (put the [NSAutoresizingMaskLayoutConstraint autoresize] setting back to [NSLayoutConstraint adjustMarginsToFitSize:NSLayoutConstraintAttributeNotAnAttribute]). It's best, however, to just set up the tableview once in code, and just set it up the same way every time the view loads. A. ralph W. Swartzwelder A. Ralph W. as well. Q: Caching in Twisted I've been trying to learn about Twisted and caches. I don't understand why, when I cache a function using `twisted.caching.FileCache`, changes to the cache don't have any effect on the users. Am I missing something? A: Twisted caches do not cache the function itself. Instead, if you have a function that you want to cache, you should wrap it in the following function and have the caching being applied to this function. `def cached_function(*args, **kwargs): return function(*args, **kwargs)` Now whenever you want to call `function_name(*args, **kwargs)`, you call `cached_function(*args, **kwargs)`. A: The caching works on the scope of an existing call to the function. So if you want your function to cache something you have to make it look like this : `def cache_with_function(*args, **kwargs): return function(*args, **kwargs)` And then you can call this function as you previously did : `cached_function(*args, **kwargs)` This works because this function is being wrapped by `twisted.caching`

Marie-Louise, We shall take pleasure in inviting you to a conference on regional electricity pricing in Europe. The conference is dedicated to discussing a wide range of issues, including market-based tools to manage intermittency, risk assessment tools for power price volatility, and issues related to temporary market mechanisms. I shall circulate a program in a few days.
