I'm in doubt if it is a good practice to use the umask in my bash scripts. Some one from the unix (and linux) stackoverflow told me that it is not considered to be a good practice, so he suggested me to avoid it. Others suggested me that it is OK to use it to keep sensitive information (e.g. passwords), and it is a good practice to do so when the information comes from shell variables. The point of this question is to know which one of the two is true. A: There is no need to use umask() in shell scripts. There is one notable exception: you might want to make sure certain directories (the sites-enabled/sites-available/nginx/static files) have group write permission. Other than that, the built-in logic already accomplishes

So, it's a good time to bring up a topic from last week's column on the Saints' quarterback situation. The Saints started the season with a two-quarterback system, with veteran Drew Brees, one of the best quarterbacks of the modern era, leading the offense. Teddy Bridgewater, the fourth-overall pick in the 2015 NFL draft, soon joined the team, and it was a seamless transition. Bridgewater's quiet presence helped provide an effective and immediate solution for New Orleans, and Bridgewater handled the role admirably. Drew Brees, meanwhile, was on his way to finishing up arguably the greatest regular season of his career and leading the Saints to a NFC-best 14-2 record and a division title. It was, in a sense, a perfect situation. Brees, 39, could play at a high level and was 0cc13bf012
