Like other such models, the exact inference for RSTs presents a closed-form solution for several important quantities of interest. Unfortunately, it is well-known that the exact inference for RSTs is computationally hard to obtain, even for the simplest cases. In this paper, we describe a novel algorithm, called the RST Splitting Algorithm, which exploits the observed structures of RSTs to obtain an efficient and exact inference. We experimentally show that our algorithm is both accurate and efficient, and the execution time and time complexity are significantly lower than those of existing exact algorithms.' author: - | Takaaki Kinoshita\ Department of Information Management, Nara Institute of Science and Technology\ Tsuruga, Ikoma, Nara, 619-0233, Japan\ ktinoshita@nitech.ac.jp - | Benjamin M.
