AutoCAD LT was a product meant for personal and small business use, whereas AutoCAD was targeted for enterprise use. AutoCAD LT was installed on a desktop PC and provided an interface that

allows users to make changes to a drawing that are stored in a database file in the C:\ directory. This file is in the .DWG or .DXF file format. The database file was a collection of files, one for each drawing element, and the information was updated whenever a change was made to a drawing element.
