For example, if the current page has the url localhost/products/floral The linked page is: localhost/products/flower/index.html?id=1 In the linked page, there is an element with the ID #products, which is the url "localhost/products/flower/index.html?id=1" (the question mark). How can I use js to detect the current page, and test whether there is a reference to this id element in the linked page? A: This should work: document.getElementById("products").href The href attribute gives you the current page's URL. a little bit of a dark side to him, he even did some really dirty things that I just love. I love this guy and I hope to work with him again soon and again soon. It is just a real moment of happiness that I got to do in the making of this piece." The Diamond Set is set to debut on
