Because Photoshop can be installed on multiple systems, you may want to install it on multiple systems at the same time. You can do this by using the Cross-Drive Installation feature. To use this feature, you must first create a backup folder for all your images. Then, install Photoshop on one system. Next, go to Adobe's website and install the Cross-Drive feature. After the feature is installed, return to the Photoshop installer that you used in step one and open the folder that you created in step one. Now, Adobe will upload all your images to this folder on the system you are installing Photoshop on. When the Photoshop installation is complete, simply go back to the first system and open the folder. Now, you should have all of your images in one folder. To read more about how to use Cross-Drive installation to install Photoshop, visit the Adobe website.

Other than a few new features and light camera sensor adjustments, some of the most important features are to make the workflow much easier. For example, you no longer need to use a "layer mask" when creating a background. The "Background Layer Mask" already makes it possible to remove different things from the background. To further streamline the process, the "Auto Mask" can be used to do the same thing. Custom Panel is another great addition as it's faster than the "Variations" panel. The Custom Panel is especially useful if you want to create a new image based on a selection or "dropped your image to the side". It's also used frequently when normal developing is not enough and the "old" Custom Panel tools are already available on the Envelope/Adobe Development panel. Sorry, it just feels a bit odd having to use two panels for different things! The custom panel tools are very useful for those who are creative and want to create all sorts of images. However, the custom panel suffers some of the problems that the Variations panel has. The custom panel is hard to customize which leads to fewer variations that can be created and less options when customizing. On the other hand, the Variations panel has far more possible selections than the Custom Panel. The biggest difference is the "Nudge" option. The Variations panel provides 3 levels of adjustment whereas the Custom Panel provides no more than a one-way slider. It is obvious that the Custom Panel is similar to the Variations panel in many aspects.

When working with a project, it is easy to get distracted by the multitude of choices and options that can be packed into a typical image editing task. After all, a picture is worth a thousand words. And what is more, you want to see and try how the picture looks like when you finish editing. Adobe changed that with the Camera Raw & Lens Match feature. It lets you view the difference in your image without making any changes to it. It also copies the adjustments on your camera Raw editor. This isn't just a time-saver, but also allows you to focus on other things while your image is being processed. With this feature, you can see how camera changes the image from the original file you captured without any changes in the editing process. You can also get a preview of the changes you made. "The browser preview pane gives the user more context when posting images for review, whether on social or collaborative platforms, or for commenting or review on a shared web page. This feature is accessible only within the browser. Share for Review functionality enables collaborators to review the selection in the browser without leaving Photoshop. Users can leave comments on the screenshot and the Reviewer can view them from within the preview. The eraser enables users to make edits interactively without needing to re-save from the preview. The eraser can only be used within the browser, and is not available in the desktop version of Photoshop.
