Don't know if this is available on Lightroom 5.2, but there's definitely an investment opportunity given the large number of Lightroom customers moving to the Creative Cloud for Lightroom. Having tried Lightroom in 5.0 and 5.1, I've seen it grow notably faster than Photoshop, and it seems to attract more users. I'm certain there are a lot of features that could be improved and benefits that could be gleaned, especially as the application grows in feature set and capabilities. I only wish I had a better-paying job to keep me occupied, but I'm happy with what I do. By the way, thanks for a great write up. Looking forward to more reviews in future. I took LR 5.2 for a spin on my MacBook Pro and I'm overall very impressed. It runs well and has all the expected and wanted (by me) stuff, like raw conversion, image processing, and the program actually has a sensible interface. The problem with any application is that it takes time to become familiar with its quirks and quirks and I have to admit I do that with LR, too. I've been pretty slack with keeping up with new changes in the release series though and this may be one time I actually 'stick' to the now current LR release – at least until I get used to the new stuff. I am a long time user of PS 7 / CS 1 and have worked extensively with LR 7 as well. Since 1.0 R7 it has really scaled up though and I am looking forward to being able to use this on my laptop as well. Working on archival prints, I was waiting for this. Now multimedia is becoming a bigger part of my work and I am never going to switch back to CS1 unless for simple edits.

Adobe Creative Standards is a set of best practices that help improve the efficiency of the design, advertising & packaging creative industries. It applies to the presentation, development and deployment of creative work initiated in Adobe software. Air's features are incredibly useful to those who make their living online, and it was clearly the most popular response to Adobe's release. This is exciting, considering that the "competitors" to Air are pretty much all Mac apps (in fact, you can run Photoshop Live on a PC, but unfortunately, not on a Mac). One of the most exciting new features is the smart object. You can click and drag on an existing photo and copy it as a new object, which, with a click of a button, can retain any layer-based properties you have applied such as exposure, colour and perspective. A photoshop tool known as "Levels" allows you to tell Photoshop exactly what a white area should be. We've seen some other cool updates to the program like new strokes. But it's also incredibly important to note that the Photoshop's back-up feature is still a major cloud

computing weak link. The highlights of the year include the ability to batch edit: When you move or copy the contents of an individual layer to other layers, Photoshop adjusts them to be positioned on top of the current content of that layer, so you only have to re-invalidate the layers you want to have updated. • Toolset Improvements: The new Photoshop has some neat new tools, including inking, which allows you to add text to a photo, and the new paintbrush, which allows you to apply colour instantly and interactively.
