Adobe Photoshop for Mac is relatively easy to install. The first step is to download the software. Once the download is complete, start the installation. Once the installation is complete, you need to locate the Adobe Photoshop.app file and open it. To access your applications, you can use the Finder. After you have found the Adobe Photoshop.app file, double-click it to install the software. The installation should be simple and self-explanatory. Once the installation is complete, you are ready to use all of the features of Adobe Photoshop for Mac.

It does have some weird quirks, however, that keep me from recommending Adobe Lightroom. For example, it doesn't understand the word "auto done." When I go to edit a photo in Lightroom, I don't want to edit: Auto Exposure, Auto White Balance, Auto Tone, Auto Color, Auto Sharpen. There must be a better way. I'm sometimes asked to export a photo as a JPEG and I use Lightroom CC 2017 for that, too. Only to strip all the metadata from it. It's easier to either go back to Photoshop and spend a lot of time figuring it all out, or spend like five minutes in the right dialog and be done. In light of their recent conversation around development and a focus on artists, it's kind of odd how little attention Adobe seems to put into making the experience of working with and sharing photos more accessible to PC and Mac users. Aside from the inability of Lightroom to export to Apple's Photos app, there are few easy to use RAW converters available for the Mac. Adobe's solution is to make everyone have to use Camera Raw Editor, yet they make virtually no effort to address the small set of people who actually want to use Lightroom for RAW editing, other than to make it slower and remove some useful features. It's not all bad, but I'm struck by how slow an operation this export is. You have to toggle between File-->Export, Import by dragging and dropping, and the dialog is too slow to enjoy pressing buttons and waiting for the export to be finished. Making the phone replacement work so well with iOS is great, and the features are implemented in a well-thought-out way. But there's one feature that I wish they had left out of this phone-replacement experience: cloud options for syncing.
