Public.PIX, which enables groups of users to collaborate on projects in an online workspace, is already used by thousands of creators to collaborate on everything from script writing to building site plans. For the first time, now photographers can use Public.PIX to access their images from wherever they are to work from and get feedback on the content. “In the past, users have been locked into editing on their desktop, but Photoshop users expect the best they can achieve in Photoshop to appear on any device, including the web and mobile,” said Brada. “By harnessing the power of the web, in a way that only the browser can, Photoshop has now been transformed from a desktop app into a mobile and web-first business platform, through the creation of our Android and iOS apps. Now individuals and organizations can easily access any image on any device with a simple click.”

With the release of PIX, Photoshop is now one of the only image editing applications that allows you to copy graphic assets within the desktop app by simply touching and holding on an image. This lets you transfer meta-data and image information such as the copyright information, comments and changes. Adobe named its new powerful face blending and retouching technology LOREM+ (LOW REMote + Me). "Conceptually, the biggest news is that the 'old' Photoshop is gone. It's been replaced by the 'new' workflows which use elemental processes, so that you can think intuitively about what you're doing and get on with it. If you have used PS over the last few years, you'll find that the fundamental approach is radically different. It's like a language shift, with paradigms converging."
