In Lightroom, I love the ability to quickly create great-looking albums, with beautiful folder structure, and all the metadata you can throw at them. I also love the fact I can retrieve them easily at any point in time. But I have used Photoshop in the past; I've also been reading up about new features. As a general user, from the workflow, organization, and stability to improved usability, I find I have only become more productive in CS6, and have learned how to do more with my editing in a more refined manner. Great editing is an invaluable tool. And while not every photograph is enhanced by amazing image processing, I find myself often making those corrections to my images—a lot with Lightroom, and even more with Photoshop. Overall, the program's functions are still pretty straightforward, the interface clean and easy to navigate. It's also way faster, and in some cases easier to use than the previous CS version. The share buttons on the toolbar make it even easier to share images with others online. I'm not talking only about my time with Photoshop, but about the improvements in the past 10 years, from Photoshop 7 to XI. For example, in Photoshop CS5 and CS6, layers were blocks. Any changes I made to one portion of an image would have affected the other. In the newest release, layers are linked to other layers. So if I change part of one layer, it's changes to all the layers that depend on it. The final issue is that Lightroom does not have a date paste function that you can use to simply paste a date into the title of a picture. You need to manually type it every time. Possibly the reason is that the tools in Lightroom are tailored to do what they do best, which is only to manage images using their time and associated metadata. With the ability to turn a serious image editor into just a fully managed digital scrapbook, Lightroom is really quite a lovely tool. However, it is at times slow and frustrating, and I still find it prone to memory bandersnatches. With Photoshop that is not the case at all. It saves and imports and exports files very quickly and it's not at risk of running out of resources.
