They do this by automatically changing camera white balance, "fixing" lens problems, and removing other problems. Elements also has a better auto-enhancing feature than Photoshop does by combining that inherent improvement with a Post-Processing filter, including Sharpen and Unsharp Mask. Elements also has an improved Spot Healing Brush tool, which is a powerful tool for quickly and accurately removing or replacing a particular spot, or area of color or texture, within an image. It also has a feature that lets you create custom geometric shapes--both regular shapes that can be filled or outlined, and flawed shapes, such as circles with a tiny spot inside.
