The ability to create “smart previews” is the most significant acquisition. Essentially, the previews can guess what the resulting image may look like with specific levels of settings. When you are adjusting the “rendering intent”, the preview will tell you what it thinks you are doing. This feature really helps me, as I sometimes need to run an image through a range of adjustments or a tool, but I still like the concept of rendering and applying settings to the image once I am done. “Rendering” allows the user to create different versions of the same photo altering the Exposure, Contrast, Shadows, Highlights, Saturation, and Whites. “Smart previews” allow me to perfect certain details such as the balance and vibrancy of colours before applying the desired settings. This feature alone makes Lightroom 5 the “ultimate” resource for photographers. This is absolutely a must have. In all fairness, Lightroom 5 is an all-new application. The core functionality of the program remains the same, but the interface is nicely revamped. It is more functional, and it makes you more productive. You even get some additional features. The key difference between the two apps is that the new Lightroom lets you import files directly from your memory card. Importing from the last used directory is no longer an option. Added with this release is new Monitor Presets feature, offering the flexibility to control the appearance of artboard and content during a location shoot, while retaining a consistent look on monitors back at the studio. Monitor Presets let you set the advanced preferences you'd typically apply to an image. The same settings can be applied to the same images exported to your other editing programs or to other photos to enable viewing on monitors back at your editing workstation.

The other advantage of this app is that you can apply filters to your photos. You can choose from all sorts of powerful filters that will even let you add special effects to your photos. The color hire also allows you to convert your photos to black and white. You can also add crazy, special, and funky looking effects to your photos, such as smashing animation, fire, stars, and so much more. The software also has a ton of advanced features, such as stitching, 32-bit editing, and the ability to import and tag images, among other things. This desktop editor is a powerful tool that will make your photos stand out. You can use it to clean-up your images, create amazing collages, and expand your social media accounts. The app is even able to work seamlessly with more advanced editing software like Adobe Lightroom.
